FROM OPERATIONS TO INSIGHTS

How Microsoft Dynamics 365 and Microsoft Fabric turn operational data into better business decisions

USD 12.9 million

the average annual cost of poor data quality in an organization (Gartner)

60%

the share of AI projects that will be put on hold because data is not ready for them *(Gartner, forecast through 2026)*

The challenge

- Management does not have a single view of performance
- Decisions are made based on last month's data
- Maintenance costs grow faster than the value delivered by data
- AI and Copilot projects stall waiting for clean, connected data

The fix isn't another dashboard. It's one connected data model.

Dynamics 365 runs the business: finance, sales, operations, service.

Microsoft Fabric turns that operational data, plus data from other systems, into one governed model for reporting, forecasting, and AI, without new data silos or duplicated pipelines.

What you will achieve

- **One trusted view** across finance, sales, operations, and customer service
- **Near real-time visibility** into inventory, production, margins, and order fulfilment
- Forecasting and AI powered by **consistent, business-ready data**

How Sii helps

Assess

Review your current Dynamics 365 landscape and reporting

Connect

Integrate Dynamics 365 with Microsoft Fabric and other business systems

Build

Create a unified data model, Power BI dashboards, and AI-ready analytics

Improve

Expand the platform with forecasting, Copilot, additional D365 modules and custom accelerators

WHY DO LEADERS CHOOSE SII?

Microsoft Partner
Since 2009

Eligibility for Microsoft co-funding

570+ specialists onboard

Solution Architects; Data Analysts & Engineers; M365, CRM, ERP Consultants & Developers; AI Engineers; DevOps & FinOps

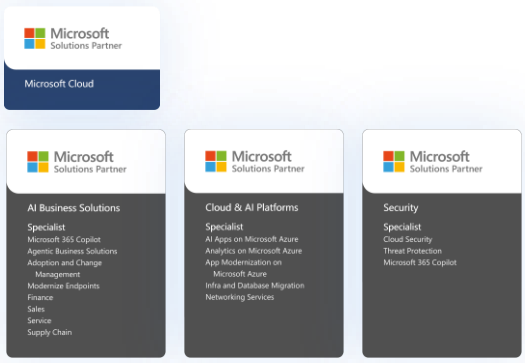

870+ completed projects

in Microsoft Business Applications & Analytics
