

AI ACT READY

Compliance that runs

WHY IT MATTERS

If your organization uses AI in the EU, the Act applies to you.

IN FORCE

The AI Act applies **now** — obligations phase in through 2028

YOU TOO

Using AI is enough — no need to build it to carry duties

UP TO 7%

Of global turnover in fines in case, you don't comply

Every AI you run has a risk tier. Do you know which one?

Too high, you overspend. Too low, you're exposed. Compliance starts with knowing.

PROHIBITED

Remove

Identify prohibited uses and eliminate or redesign them

HIGH-RISK

Control

Implement the required controls and oversight

TRANSPARENCY

Disclose

Determine what needs to be disclosed and communicated

EVERYTHING ELSE

Govern

Establish the policies, ownership, and processes

OUR ANSWER

WE MAKE COMPLIANCE RUN

We hand over more than a deck. We build the systems that run your compliance every day:

A living AI register

Every system, its tier, its owner, its evidence — always current.

Controls in your pipelines

Disclosure, logging and oversight run in your products — not in documents.

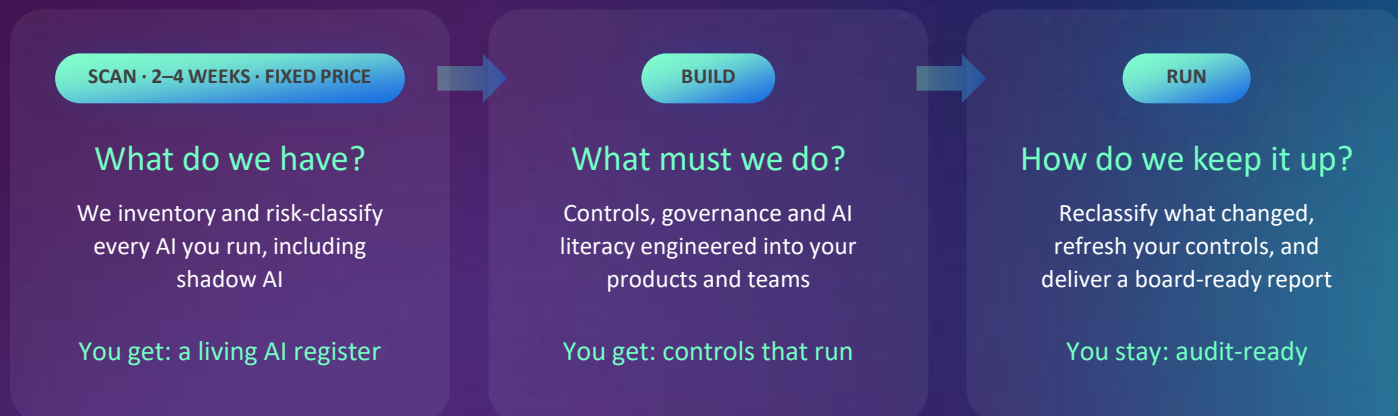

It keeps running

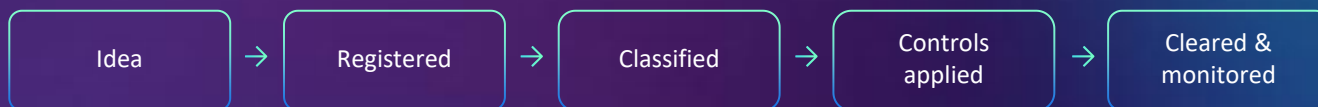

New AI joins, controls follow, evidence accumulates — quarter after quarter, with Sii alongside.

The AI Act Readiness Program

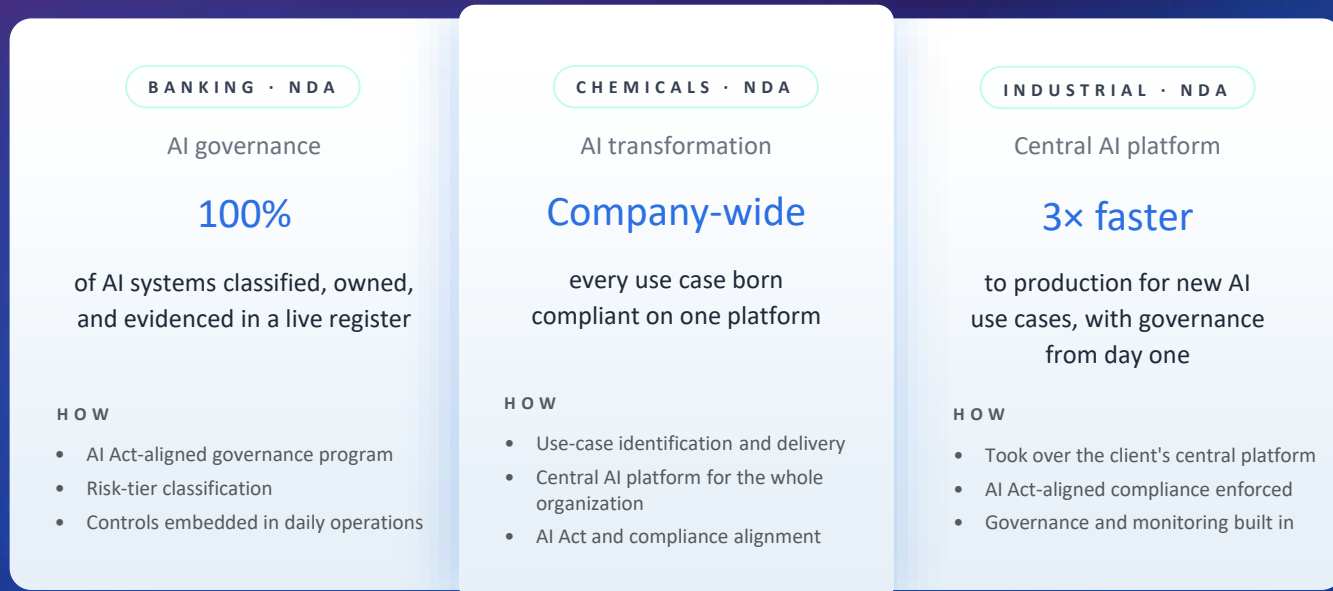

One program to bring every AI app into your organization — structured, compliant, fast

Then every new AI app follows the same path — **compliance by design**
